Xiamen Golden Egret Special Alloy Co., Ltd.

## Dear Herramientas lorenzo Salvador España,s.l

For the test of elastic compression, since the test method required by the customer is DIN 50106, GESAC could not find the relevant exact test method in all platforms in China.

Finally, GESAC used the Chinese standard **GB/T 7314-2017** for testing and passed the test.

As for third-party testing, we have asked SGS China and Bureau Veritas China, SGS said they is unable to carry out the test because they do not have the appropriate testing equipment. While Bureau Veritas China said that they can use both Chinese standards and ISO standards for testing but not German standards DIN 50106 for testing. But since ISO standards have not been certified by CNAS, they can only provide test results of Chinese standards.

GESAC would like to ask HLS help to find a third party where can test by the method of ISO or DIN 50106 in Spain and help complete the elastic compression test.

Thank you!

Best Regards
